

Plastic Free Campus

Plastic pollution is currently one of the biggest environmental concerns. The short-term benefits and convenience of plastic and plastic goods have led to a boom in the production and consumption of plastic. Over the past century, excess-consumption of plastic has surpassed management of plastic waste and led it to become a scourge to the planet. Plastic is a menace that impacts not the environment as well as our health and wellbeing. We have all contributed to this problem, knowingly and unknowingly and we must work to reduce and eliminate plastic pollution.

Government has decided to take plastic ban as a national level campaign to address the environmental hazards being caused by the indiscriminate use of plastic educational institutions must lead this nation-wide endeavor. There is a need for educational institutions to actively contribute to the effort of banning the use of single-use plastics.

- Nature can't digest it, Plastics break UP into smaller pieces called micro-plastics. It never breaks down.
- Plastics affect millions of sea and land creatures who are injured or killed eating them.
- Plastics are now found everywhere: in our food, drink, in nature and all over the planet.

IT department, MJCET organized an awareness program about “ PLASTIC FREE CAMPUS” on 19 January 2021 with minimal number of staff and students. This event was conducted with all precautions of covid19 protocols.
