

**GUIDELINES FOR SPONSORSHIP TO
CONFERENCES/SEMINARS/WORKSHOPS FOR THE YEAR 2008-2009**

The following are the guidelines for sponsorship of faculty members for presenting papers in Conferences/Seminars or attending Conferences/Seminars/Workshops from April 1, 2008 to March 31, 2009:

(A) Guidelines for Presenting Papers in Conferences and Seminars

1. Every faculty member is eligible to claim sponsorship for presenting papers in a maximum of 3 International/National Conferences/Seminars in the financial year.
2. Faculty members presenting papers in International/National Conferences/Seminars are eligible to avail a maximum of Rs. 5,000/- per Conference/Seminar towards registration fees + Travel Allowance + Incidental Expenses.
3. Faculty members are advised to present papers in Conferences/Seminars organized by IIT's, NIT's, Deemed Universities, University Colleges, International and National professional societies like IEEE, ACM, IE(I), CSI etc.
4. In case of multiple authors, only the first author will be eligible to claim sponsorship under clause (A).

(B) Guidelines for Attending Conferences/Seminars/Workshops

1. Every faculty member is eligible to claim sponsorship for attending a maximum of 3 International/National Conferences/Seminars/workshops in a year.
2. A faculty member is eligible to claim a maximum of Rs. 3000/- per anum towards registration fees + Travel Allowance + Incidental Expenses for attending Conferences/Seminars/Workshops. The amount of Rs. 3000/- may be utilized for attending one, two or a maximum of 3 Conferences/Seminars/Workshop in a year.
3. Faculty members are advised to attend conferences/seminars/workshops conducted by reputed institutions like IIT's, NIT's, Deemed Universities, University Colleges and those sponsored by AICTE and ISTE.

(C) Guidelines for availing Travel Expenses and Incidental Expenses

1. Faculty members are permitted to avail Travel Expenses and Incidental expenses whenever they go outside Hyderabad either to present paper in Conferences/Seminars or to attend Conferences/Seminars/Workshops. For events within Hyderabad city they are not eligible to claim these allowances.
2. Faculty members may utilize part of the amount of Rs. 5000/- under Clause (A) towards T.A./Incidental Expense along with registration fees for presenting papers in Conferences/Seminars.
3. Faculty members are permitted to utilize part of the amount of Rs. 3000/- under Clause (B) towards T.A./Incidental expenses along with registration fees for attending Conferences/Seminars/Workshops.
4. Professors can claim T.A. for A/c 3-Tier category in train or A/c bus as the case may be. Associate and Assistant Professors may claim T.A. for second class 3-Tier category in train or A/c bus as the case may be.

(D) General Guidelines

1. A faculty member may avail the facility either under Clause (A) or Clause (B) or a combination of (A) and (B). The guideline regarding sponsorship for a maximum of 3 Conferences/Seminars/Workshops in a year will hold good either for Clause (A) alone or Clause (B) alone or a combination of Clauses (A) and (B).
2. In case of AICTE/ISTE/DST/UGC sponsored programmes which are fully reimbursed, faculty members will be eligible to claim only incidental expenses when they attend outstation programmes.
3. Papers submitted for publication in Conferences/Seminars should be routed through the Heads of the Departments
4. The Head of the Department will maintain a complete record of all the sponsorships of the faculty members in the standard format supplied herewith.

MUFFAKHAM JAH COLLEGE OF ENGINEERING AND TECHNOLOGY

**NOTE ON SPONSORING FACULTY FOR PROFESSIONAL
SOCIETY MEMBERSHIP UNDER FACULTY DEVELOPMENT
BUDGET**

A provision of Rs. 6 lakhs has been made in the annual budget for the financial year 2007-2008 under the head of Faculty Development. Faculty members attending and or presenting papers in National and International Conferences, Workshops etc. are being sanctioned the necessary financial support in the form of registration fees etc. from this budget. Till now an expenditure of about Rs. 1 lakh has been incurred under this head leaving a balance of Rs. 5 lakhs.

As per the 3-year vision document endorsed by the Governing Council in one of its meetings efforts have to be made by the college towards faculty retention and development. As part of the efforts towards this, it is proposed to encourage faculty members to become members of professional societies by offering them subsidy in the life membership fees. This will not only give a positive signal to the faculty members about the commitment of the institution towards their development but will also carry good weightage with the AICTE and Osmania University. More explicitly, it will be beneficial during the accreditation process. The faculty will in turn be benefit by receiving Journals, copies of Conference proceedings, discounts in the fees for conference registrations, subsidised accommodation in guest houses etc.

The following is the life membership fee detail of some of the professional societies:

1.	Institution of Engineers (India)	Fellow	Rs. 3,900/-
		Member	Rs. 2,900/-
2.	Indian Society for Technical Education		Rs. 2,050/-
3.	The Institution of Electronics and Telecommunication Engineering		Rs. 4,200/-
4.	Computer Society of India		Rs. 4,250/-

THE PROPOSAL

Faculty members who have put in more than 2 years of service in MJCET (joined on or before January 1, 2006) will be eligible to claim a maximum amount of Rs. 3,000/- as reimbursement for paying life membership fees in Professional Societies relevant to their area of specialization.

EXPLANATORY NOTES

- (i) The reimbursement will be based on the actual payment made and will not exceed the maximum limit of Rs. 3,000/-.
- (ii) Faculty members will have to pay themselves the additional membership amount in excess of Rs. 3,000/-

FINANCIAL IMPLICATION

It is found that about 100 faculty members will be eligible to avail the benefit under the proposed scheme. The maximum expenditure to be incurred will be Rs. 3 lakhs which is well within the Rs. 5 lakhs balance available under the Faculty Development Head.

It is therefore recommended that the proposal be kindly approved. This gesture will go a long way towards faculty development and improvement in their satisfaction level. This may also help the target of faculty retention.

NOTICE

**MEMBERSHIP IN PROFESSION SOCIETIES/BODIES
FOR FACULTY**

The Sultan Ul Uloom Education Society is kind enough to have approved the proposal to sanction a maximum amount of Rs. 3,000/- towards life membership in Professional Societies/Bodies like IE(I), ISTE, IEEE, ACM, CSE, IETE etc. for the faculty members of MJCET.

Faculty members of MJCET who have put in more than 2 years of service (Joined on or before January 1, 2006) are eligible to claim a maximum amount of Rs. 3000/- towards life membership fee in Professional Bodies relevant to their field of specialization. In case the membership fee is more than Rs. 3000/- the excess amount should be borne by the faculty member.

The mode of payment for Rs. 3,000/- shall be as follows:

- (i) D.D. in the name of the Professional Body will be made by the college. In case the amount is more than 3,000/- the faculty member will have to deposit the excess amount with the accounts section.
- (ii) Reimbursement to the extent of Rs. 3,000/- on production of valid receipt issued by the Professional body.

The faculty members are urged to make use of this one time concession granted by the Society and become members of Professional Bodies in their area of specialization. The applications forms should be addressed to the Principal and routed through the Head of the Department.

Sir

Sub: Request to reimburse the amount paid towards Presentation and Paper Publication – Reg.

- ① I have to state that, I enrolled as a research scholar at MANUU in 2017. The University mandates its research scholars to publish at least two papers in peer reviewed journals and a presentation as a part of the PhD course work. So, I have already published a paper in Journal of Emerging Technologies and Innovative Research (JETIR) in Volume 5, Issue 9, 2018 September, Titled: "Travelling Narratives: Modernity and the Geographical Imaginary".
- ② Further, I also gave a Presentation at OUCIP, Hyderabad on 6th October, 2018 entitled "Unveiling the Visions: A Study of Modern Travel Literature".

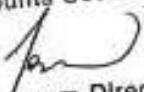

I request you to kindly reimburse the amount of Rs. 2500/- paid towards publication charges for the paper published in (JETIR) and registration, participation and publication fee of Rs. 2000/- paid towards National Conference Presentation at OUCIP. (2500 + 2000 = 4500/-)

Sub: Permission to publish the paper & sanction the registration fee.

Respected Sir,

I Mr. Md Noorullah Khan Assistant Professor in ECE Dept, would like to bring to your kind notice that my technical paper "A High Speed Fully Differential Dynamic Comparator For Use In Pipelined A/D Converters" got selected in **2nd International Conference on Inventive Systems and Control (ICISC 2018)**, which is organized by JCT college of Engineering and Technology, Coimbatore, India, on dates 19 & 20 January, 2018, and the proceedings will be published in IEEE Xplore publication. Hence I request you to kindly permit me for the publication of paper and sanction an amount of Rs 6000/- (six thousand only) towards the registration fees of the conference.

Thanking you

Subject: Accepted Research work at **IEEE**, International conference on Inventive Systems and Control – ICOISC- 2018 19th and 20th Jan. – Chennai –
– Regarding.

Respected Sir,

I Mohammed Mahmood Ali, working as Associate Professor, in CSE department, bring to your notice, for information that my research paper is accepted at "IEEE International conference on Inventive Systems and Control (ICOISC)", indexed in IEEE Xplore and SCOPUS., which will be held from 19th - 20th Jan. '18.

In this regard I request for permission to present the research paper titled "Surveillance of E-Crimes from short-form words in Instant Messages of Messaging Applications", the registration fee for this paper is Rupees 7,000/- (Seven Thousand rupees only). Further, To and Fro traveling will cost an additional expense of 3,000/- rupees. So, approximately an expenditure of rupees 10,000/- (Ten Thousand rupees only) will be incurred.

Hoping, my request may be considered, for sanction of funds to publish my research paper at this prestigious IEEE sponsored and SCOPUS indexed conference.

Thanking you,

Subject: Permission for Paper presentation

Respected Sir,

I am writing this letter to request for permission to attend the two days International conference being held at Gitam University, Hyderabad on 11th and 12th of Aug. The topic to be discussed in the conference is quite relevant to my research work and this is the reason I am keenly interested in presenting a paper in it. My latest research paper entitled "**Interactive Listening Activities in ESL classroom: from Passive to a more Comprehensible Input**" is ready for presentation.

I seek your permission for being a part of this conference. I hope you will certainly accede to my request and oblige. The registration fee of Rs 1500/- was paid online (NEFT), the details of which are given below for your perusal.
NEFT INB: IRD8965056, ENG DEPT. GST HYD.

Paper ID: ICCVBIC -062

Greetings from Inventive Research Organization,

The scope of International Conference on Computational Vision and Bio Inspired Computing (ICCVBIC 2018) is being organized on 29-30 November, 2018 by the **Inventive Research Organization** in association with RVS Technical Campus, at Hotel Arcadia, Coimbatore, Tamil Nadu, India. ICCVBIC provides quality key experts who provide an opportunity in bringing up innovative ideas.

The organizing Committee is pleased to inform you that the peer- reviewed & refereed conference paper titled as "ABio Potential Sensor Circuit of AFE Design With CT Σ - Δ Modulator" has been accepted for Oral presentation at the ICCVBIC conference on 29-30 November, 2018.

We would like to kindly invite you, to present the research paper at the conference site in Coimbatore.

Sincerely Yours,

Conference Chair - ICCVBIC 2018,
Dr.S.Smys,
Professor, Department of CSE,

A Bio Potential Sensor Circuit of AFE Design With CT Σ - Δ Modulator

M.A. Raheem¹, K. Manjunathachari²

¹ECE Department, MJCET, Hyderabad, Telangana, India.
(abdulraheem@ieee.org)

²ECE Department, Gitam University, Hyderabad, Telangana, India.
manjunath4005@gmail.com

Abstract. In this context, the AFE with 4-channels is described, which has high impedance for low power application of bio-medical electrical activity. The challenge in procurement precise recordings of biomedical signals for example EEG/ECG to study the human body in research work. This paper is to propose Multi-Vt in AFE circuit design cascaded with CT modulator. The new architecture is proposed with four different input signals filtered from channel to $\Sigma\Delta$ modulator. In this approach, the amplifier is low powered multi-VT Analog Front-End which consumes less power by applying dual threshold voltage. Type-I category 4 channel signals of the first mode: 50,100,150 and 500 Hz amplified from AFE are certain to 2nd CT sigma-delta ADC. Illustrate the Signal-NR and Signal-NDR as 63dB and 60dB respectively, Intense consumed the power of approx. 11mW. The circuit design was simulated spectre tool in a 0.18 μm standard UMC CMOS process at 1.8V supply. The AFE design is senses & stately measure the frequency response from 50 Hz to 360 Hz, portray the Signal-NR and Signal-NDR observed as 63dB and 60dB correspondingly, Intense consumed the power of 11mW. The AFE stately frequency response starting 50 Hz to 360 Hz, programmable gain from 52.6 dB to 72 dB, input referred noise would be a value of 3.5 μV in the amplifier range of bandwidth, NEF of 3.

Keywords: Discrete Time (DT), Continuous Time (CT), Analog Front End, Signal Noise Ratio (SNR), SNDR, Sigma Delta Modulator

1 Introduction

You IMPROVEMENTS in Complementary MOSFET equipment's and low powered integrated circuits have stimulated considerable concerns in wearable gadgets. Sensor interface is the main part in the wearable gadgets, design of which should meet many uncompromising requirements both in digital block and in analog block. In designing AFE circuits, the corporal signals' nature is of much concern. The amplitude level of these signals ranges from volts to mV and the frequencies vary from DC to a few kilo Hz, To deal with these type of signals, the AFE must

A Review on IEEE 1451 Family of Standards and IoT Stack Layers

Syed Khaja Ahmeduddin Zakir¹, Dr. Kaleem Fatima²

¹Assistant Professor in ECE Dept, Muffakham Jah College of Engineering & Technology, Hyderabad, India

²Professor in ECE Dept, Muffakham Jah College of Engineering & Technology, Hyderabad, India

ABSTRACT

In this paper we explore the state of the art IEEE 1451 family of standards and the IoT stack layers. The IEEE 1451 is a family of standards for Interfacing Smart Transducers. These standards were created by Institute of Electrical and Electronic Engineers (IEEE) Instrumentation and Measurement Society's Technical Committee on Sensor Technology. The Internet of Things (IoT) is a global network of communicating Things, which is defined in a broad sense. The "Thing" has got sensing, actuating and computation capabilities. It can be uniquely addressed and can respond to stimuli from the environment.

KEYWORDS-IEEE 1451, IoT, STIM, TEDS, TII, NCAP

I. INTRODUCTION

We find the usage of Transducers globally in almost all the sectors of life including Home, Medical, Transport, Energy and Industrial automation. A Transducer is a device which converts an electrical parameter to non-electrical parameter and vice versa. A Transducer can be a Sensor or Actuator. A Sensor is a Transducer which can generate an electrical signal in proportion to a physical, biological or chemical parameter where as an Actuator takes an electrical signal and responds by taking a physical action. A Smart Transducer is a collection of analog or digital transducer element, a processing unit, a communication controller and associated software for signal conditioning, calibration, diagnostics and communication[1].

The Internet of Things (IoT) was proposed a decade ago for connecting physical devices at the network level. The IoT will be an integrated part of the future internet. With IoT, we can establish a connection to anything, access it from anywhere and at any moment of time, and can efficiently access any type of service and information about any object. The purpose of IoT is to extend the use of internet with remote control ability, sharing of data, constant continuous connectivity and so on. All the devices can be connected to the local and global networks by using an ON and data collecting embedded sensor.

The following sections of the paper are organized as: Section II covers the IEEE 1451 architecture and the family of standards, Section III covers the IoT Stack Layers, protocols and applications.

II. IEEE 1451 A. Architecture

The IEEE 1451 standard based smart system is composed of Smart Transducer Interface Module (STIM), Transducer Independent Interface (TII) and Network capable application processor (NCAP). The conceptual diagram is represented in Figure 1.

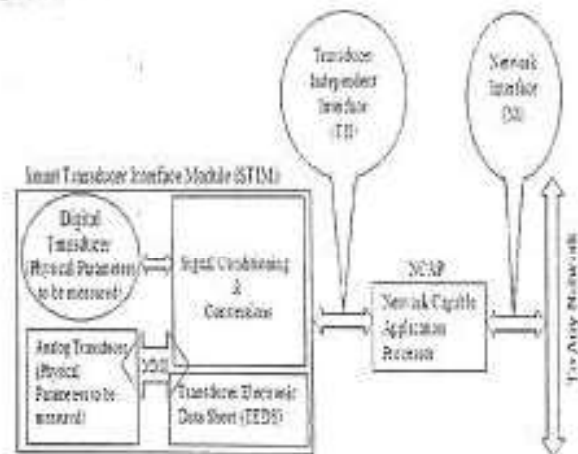

Figure 1. IEEE 1451 based conceptual Architectural diagram

The NCAP is a network node that can perform application processing and network communication functions. It is the smart sensor's window to the outside world. It consists of a processor with an embedded operating system. Any transducer or group of transducers can connect to any control network through a properly configured NCAP. Figure 2. Represents an example of NCAP being used through Ethernet.

Fourth International Symposium on Intelligent Systems Technologies and Applications (ISTA'18)
Paper-ID and Title: 1570461653 - Maneuvering Black hole attack using different traffic generators in MANETs
Authors: Fahmina Taranum
Paper Category: Regular Paper (Oral Presentation - 15-20 minutes)
Proceedings Series: Springer Advances in Intelligent Systems and Computing Series

Dear Ms. Fahmina Taranum

Congratulations! On behalf of the Technical Program Committee and Organising Committee, we are pleased to inform that your paper 1570461653- Maneuvering Black hole attack using different traffic generators in MANETs has been accepted for oral presentation at the Fourth International Symposium on Intelligent Systems Technologies and Applications (ISTA'18), September 19-22, 2018, PES Institute of Technology (South Campus), Bangalore, India.

All accepted papers will be published in the prestigious Advances in Intelligent Systems and Computing Series (Springer, Germany). The papers will also be made available in SpringerLink digital library.

Publication and presentation of this paper at the conference are contingent upon:

1) Your completion and submission of the camera-ready final version of the technical manuscript for the paper. Camera-ready copy must be submitted according to the instructions posted at <http://www.acn-conference.org/ista2018/sub.html>.

The deadline for submission of the final manuscript, after incorporating reviewers' comments if any, is July 31, 2018. As we need to meet the deadline given by Springer, a further extension cannot be given.

All final manuscripts of paper should be submitted only through EDAS portal.

Before uploading your camera ready paper, source files, paper revision details and copyright in EDAS, please:

a) Check that title and abstract in EDAS match your camera-ready paper exactly. Please use Title Case for the paper title, i.e. capitalizing all main words.

b) Compare all author names in EDAS with the author list in your paper. They MUST BE identical and in the same order. This is very important because we will be using the information provided in EDAS to generate the final conference program and the table of contents for Proceedings.

c) Please ensure that the abstract and title should be readable stand-alone and not contain any references or unexplained acronyms. You are allowed to modify abstract and author list yourself.

d) You cannot modify the title for the paper, please send an e-mail to ista.symposium@gmail.com if that is necessary and give a valid reason.

2) Receipt of the signed Springer copyright form through EDAS. Please upload the scanned copy of signed copyright form (PDF) on EDAS. To upload copyright forms, first log into EDAS, then go to "My Papers" tab and click on the '(c)' icon under the column "Copyright Form" where your paper is located. Further instructions are posted at <http://www.acn-conference.org/ista2018/sub.html>.

3) Your pre-registration for the conference. For inclusion of the paper in the conference proceedings, every accepted paper must be accompanied by at least one full registration. Where an author has more than one accepted papers, he/she has to register for each paper separately. The registration details are available at <http://www.acn-conference.org/>

Maneuvering Black-Hole Attack using different Traffic Generators in MANETs

Fahmina Taranum¹, Khaleel Ur Rahman Khan²

Osmania University: Computer Science and Engineering¹, J.N.T.U.H.: Computer Science and Engineering²

Muffakham Jah College of Engineering and Technology¹, ACE Engineering College² Hyderabad, India.

ftaranum@mjclege.ac.in¹, khaleelrkhan@gmail.com²

Abstract

Malicious attacks in the network should be detected and examined by exploring its type, intension, nature, cause and effects to handle security threats. The attack could be just for an acquaintance or with determination to harm a network. The type of attack implemented is black-hole in which the traffic is attracted by node and destination is kept deprived of the transmission. The analysis is done using FTP, VBR and CBR generators at the application layer. VBR is supported by IPv4 only. The scenario is designed using IPv4 over DYMO routing protocol as it is an advanced version of AODV for the traffic generators that supports IPv4. The traffic monitoring protocols are applied to check the packet delivery rate at the sink and in case of any possibility of leakage, the traffic is directed through some other shortest path with the assumption of availability of malicious node which needs to be eliminated from transmission as a preventive measure. Black hole usually assimilates traffic of the network around it and tries to harm the network by reducing the performance metrics of the system. The aim is to enhance different characteristics for diverting the traffics towards a black hole node in the initial scenario, later on detecting a malicious node-preventive steps are applied viz. the node is taken in a loop of suspension and is deactivated from transmission by using a phenomenon called Human-in-the-loop. To measure Performance-metrics like Utilization, Average Transmission delay, End-to-End delay, Traffic analysis, Packet delivery rate, etc. are used.

Keywords: DYMO-DYnamic On-demand routing protocol; CBR; FTP+; VBR; Black Hole; IPv4; IPv6.

Section I Introduction

The present era is an evolving telecommunication epoch, where the contrivance of emerging ideas and proposal were practiced to integrate a plethora of different inventions for producing incredible results. To meet standard escalating assail as a requirement for enhancing security ultimatum - various factors are examined as a measure to provide protection such as type of attack, intension, cause and impact of attack, etc. The fast changing revolution in the itinerant platform and wireless technologies has become the reason of interest for the researchers to explore and apply different adaptable strategies for preventing a system. With the enhancement in technologies, there are still many pitfalls to work on viz. limited performance, loss of data, re-routing of packets, and threat to network etc. The reasons for loss of packet includes: - no route, forcefully drop, forcefully due to aging, buffer overflow, expired TTL, queue overflow, retransmission limit and other reasons. The delays at the

Dear Prof/Dr.Fahmina

Welcome to CNC2018

Congratulations - Your paper for the **Ninth International Conference on Advances in Communication, Network, and Computing – CNC 2018**, has been accepted. The CNC2018 conference is jointly organized by the IDES and the Association of Computer Electrical Electronics and Communication Engineers (ACEECom) and will be held during **Mar 10-11, 2018 in Bengaluru, India**. The consolidated re-viewer's comments for the paper are attached along with this email.

<http://cnc.theides.org/2018/>

All the accepted papers are eligible to register in the Walter De Gruyter Track or Grenze Track. The Walter De Gruyter papers will be made available in the De Gruyter Digital Library and the Grenze Track papers will be made available in the Grenze Digital Library and will be submitted to possible indexing in all the major indexing services like DBLP, EI, IET Inspec, Scopus, Google etc

Authors submitting their papers to concerned Track may use the **standard template**. Failing this will result in rejection. All camera ready papers must be submitted in MS WORD file format only (PDF is NOT accepted) not exceeding stipulated pages including text, figures, tables and references. Please ensure that you incorporate the reviewer's comments into your camera ready submission.

The registration fee details, Registration form, copyright form and camera ready paper submission are mentioned in the following link.

Jaya R. Surywanshi,

<http://cnc.theides.org/2018/regi.htm>

It is mandatory for at least one author of an accepted paper to register in order for the paper to appear in the Proceedings of the Technical Sessions of the **CNC2018**.

For Registration form etc : <http://cnc.theides.org/2018/regi.htm>

Reduction of Power Consumption at Mobile nodes in MANETS

Ms. Fahmina Taranum¹, Mr. Khaleel Ur Rahman Khan², Muhammed Aleemuddin³
Osmania University: Computer Science and Engineering¹,
J.N.T.U.H: Computer Science and Engineering²
Mulfakham Jah College of Engineering and Technology³,
ACE Engineering College⁴,
Hyderabad, India,
faranum@mjclege.ac.in¹, khaleelkhan@gmail.com²,
aleem93.md@gmail.com³

Abstract

With the advancement in cellular technologies many solutions were proposed for reducing the power consumption of the mobile devices to resolve the issues of low battery power and mobility management. An attempt has been made in the designed scenario for the same. Different routing algorithms, energy models, battery models and modulation schemes are proposed and compared to justify the title. The conventions of node types used are base, mobile and relay. CBR traffic and point to point links are used to connect the nodes. To increase the spectrum of the signal CDMA is used in between RN and BS and OFDMA in between BS and MS. The concept of relay is added to increase the transmission range, when the nodes are in mobility and is not reachable to the base station. The amount of energy utilized is measured for both relay and non relay node network. The configuration and .stat file are used to do the comparison. Dymo (Dynamic Manet on demand routing protocol) is a unicast advanced algorithm which is dynamic in nature and route discovery is explored in the direction of destination node, rather than flooding the packets in all directions as is the case in AODV. This could act as a reason for the consumption of less power in mobile nodes of Dymo when compared to other routing algorithms.

Keywords:- Constant Bit Rate, Mobile Station, Base Station, Relay Node, Energy, IEEE 802.16

Introduction

With the gradual development of technologies like LTE, 4G and 5G models for efficient and smooth transition towards advanced leading edge technologies to increase the capacity, connectivity, and battery issues, there is still problem of making advanced technologies compatible with the existing technologies. There are many approaches and algorithm proposed by many researchers to reduce power consumption in MANETS but still the research is in progress. The intention of the experimentation is to reduce power consumption at the mobile station. The scenarios are designed by using 802.11, 802.16 with and without relay node and added with more features of battery model, energy model and different modulation technique to increase the signal capturing facility. The provision to enable OFDMA at the MAC layer is available in IEEE 802.16, thereby making it easier to analyze OFDMA burst received and forwarded to MAC. To model the PHY layer certain characteristics need to be incorporated at the source and the destination end like modulation, coding, noise, interference and antenna gains. In QuaINet, a MAC Layer interface consists of Ranging type as normal or CDMA, normal type represent OFDMA modulation by default. The PHY component caters for signal transmission, reception and reflects the effects of the MAC, distortions and interference. As far as latest network scenarios and technological development are concerned, power optimization should be the first and foremost thing of concentration for NGN (Next Generation Networks) as Battery discharge, when experiencing highly mobile environments is more. The scenario is designed with fewer nodes so as to make analysis easier. The network consist of three mobile station, one base station and one relay station connected with a subnet and data transmitted through CBR and point to point link. Dymo is an advanced version of AODV, which is purely reactive protocol with routes computed on demand.

The rest of the paper is organized as follows: section II provides a brief description of related work; section III describes about topologies or architectures designed and analyzed, section IV discusses the result analysis of power consumption, energy models and its statistical analysis. Section V portrays conclusion and future research scope.

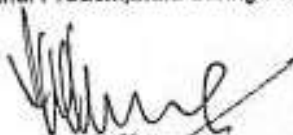

Certificate of Paper Presentation and Participation

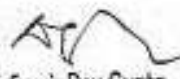

This certificate is awarded to Prof./Dr./Mr./Ms. **FAHMINA TARANUM**

IOT BASED DESIGN OF OBJECT SORTING SYSTEM USING CAPACITIVE AND INDUCTIVE PROXIMITY SENSOR

¹Rehana Farheen, ²Naila Ali, ³Mohammed Faizaan Hussain, ⁴Osman Omar,
¹Assistant Professor, Dept of ECE, MJCET Engineering College, Hyd, Telangana, India

^{2,4} Student, Department of ECE, MJCET Engineering College, Hyd, Telangana, India
rehana.farheen@mycollege.ac.in, nailaali1997@gmail.com.

Abstract— Sorting is one of the important tasks in production line, analyzing the products for the market is even more important. Internet of Things is a new revolution of the Internet. Analysts predict that new Internet of Things (IoT) products and services will grow exponentially in next year's. This paper presents a plain sailing method of differentiating the objects produced by passing it through different sensors and separating them by directing them into their respective channels and further forward them to their respective units. Designing of the automated sorting machine using conveyor belt to need the manufacturing industry in many fields is a very complex process. The system needs to satisfy industry requisition. This is an industrial automation based application. It shows the concept of normal conveyor belt that can identify the position and properties of objects. This helps to increase the productivity and energy efficiency in production machines. The basic principle of the sorting system is Capacitive proximity sensor. Capacitive Proximity Switch and Sensor works when the object enters in the sensing zone of the switch, capacitance between two plates of capacitor (one plate is represented by electrode at sensing face of the switch and another by all surrounding material which is connected to the earth) changes. The object move across the capacitive sensor which sense the object and again send the NodeMCU which move the specific servo motor accordingly (as the code programmed in the NodeMCU) and the object get sorted and quantity of object sorted data is sent to the cloud through Thingspeak for Data collection and analyses.

Index Terms— Internet of things, Capacitive proximity sensor, Inductive proximity sensor, conveyor belt.

1. INTRODUCTION

In recent times, garbage disposal has become a huge cause for concern in the world. A voluminous amount of waste that is generated is disposed by means which have an adverse effect on the environment[1]. The common method of disposal of the waste is by unplanned and uncontrolled open dumping at the landfill sites. This method is injurious to human health, plant and animal

life [1]. In India, rag pickers play an important role in the recycling of urban solid waste. Rag pickers and conservancy staff have higher morbidity due to infections of skin, respiratory, gastrointestinal tract and multisystem allergic disorders, in addition to a high prevalence of bites of rodents, dogs and other vermin. Dependency on the rag-pickers can be diminished if segregation takes place at the source of municipal waste generation[2]. The economic value of the waste generated is not realized unless it is recycled completely. Several advancements in technology[3] has also allowed the refuse to be processed into useful entities such as Waste to Energy, where the waste can be used to generate synthetic gas (syngas) made up of carbon monoxide and hydrogen. The gas is then burnt to produce electricity and steam; Waste to Fuel, where the waste can be utilized to generate biofuels. When the waste is segregated into basic streams such as plastic, glass, metal, paper the waste has a higher potential of recovery, and consequently, recycled and reused. The metal waste fraction is reused or recycled by heating and reshaping, similarly the plastic and glass waste is recycled.

Even though there are large scale industrial waste segregators present, it is always much better to segregate the waste at the source itself. The benefits of doing so are that a higher quality of the material is retained for recycling which means that more value could be recovered from the waste [3]. The occupational hazard for waste workers is reduced. Also, the segregated waste could be directly sent to the recycling and processing plant instead of sending it to the segregation plant then to the recycling plant.

This paper has been organized as follows: section I presents introduction, section II contains the working principle and mechanism, followed by section III hardware implementation and lastly conclusion.

Subject: Accepted Research work at IEEE, International conference on Innovative Technologies in Engineering 2018 (ICITE-2018) from 11th to 13th April - Osmani University, Hyderabad - Regarding.

Respected Sir,

I Mohammed Mahmood Ali, working as Associate Professor, in CSE department, bring to your notice, for information that my research paper is accepted at "IEEE International Conference on Innovative technologies in Engineering 2018 (ICITE-2018)", indexed in IEEE Xplore and SCOPUS, which will be held from 11th - 13th April, 2018.

In this regard I request for permission to present the research paper titled "SDF: psychological Stress Detection Framework from Microblogs using Pre-defined rules and Ontologies", the registration fee for this paper is Rupees 6,000/- (Six Thousand rupees only).

Hoping, my request may be considered, for sanction of funds to publish my research paper at this prestigious IEEE sponsored and SCOPUS indexed conference.

Thanking you,

Yours faithfully,

Mohammed Mahmood Ali,
Assoc. Professor,

Abstract— Spreading of Unwanted microblogs from Social Networking Sites (SNS) is pervasive in social media that leads to unaccountable disturbances such as Mental disorders, Wastage of precious time, Break-up of relationships, Stressness giving birth to psychological health problems and many more. To overcome these problems, the immense necessity is to ignore those unwanted microblogs in SNS, which is uncontrollable by humans due to addiction towards social media. Even the literate people fall prey to psychological stress from SNS. This seriousness of stress related issues is very rarely attended by researchers, to tackle such vicious microblogs. The prediction strategy is proposed named as Stress Detection Framework (SDF) to analyze the stress in microblog. SDF is developed using *Ontology based Information Extraction technique using Probabilistic Model (GSHL & TreeAlignment Algorithm)*, set of *pre-defined knowledge based logical rules* that constitutes of low-level attributes (simple textual, linguistic words) and visual features (emojis & Images) and social Interaction (Likes and Dislikes) to detect and predict stress in microblog messages. SDF is compared with TensiStrength that has shown an increase of 94.2% of stress detection rate. The experimental results obtained will aid to take precise decision for blocking/eradicating/segregating stress related microblogs from Social media (especially SNS).

Keywords— Psychological stress, Social Networking Sites (SNS), microblogs, Ontology, Stress Detection Framework (SDF), low-level attributes, Social interaction attributes.

I. INTRODUCTION

Predicting of Stress related messages in social media especially from Social Networking Sites (SNS) has made adverse affect on human health condition and their behavior. Pew Research reports briefed the upsurge of social media and its impact on civic life due to sharing of information leading towards psychological stress on human minds [1]. The dark face of Facebook SNS is it collects and then uncover innumerable hidden facts of the individual's privacy unintentionally with other individuals unknowingly. The affordances of Facebook is programmed in such a way that explore the individual profiles, likes, dislikes, relationships, negative psychological emotions, thoughts, events, visibility and persistence resulting in unusual stressfulness [2]. The Surveillance of Facebook Offline and Online contacts had revealed the ex-partners relationships, break-ups and their association of sexual desire ended in degradation of personal growth and stressful life [3]. No doubt, the feasibility of

Facebook's social interaction provides the users with uncountable advantages of Fast and economic communication for sharing of information, providing updates, personal satisfaction through entertainment and establishing reliable connectivity with other groups along the wide area networks at cheaper costs.

The accumulation of psychological stress words in microblogs from various SNS (Facebook, WhatsApp, LinkedIn, Twitter) of same user is bit difficult task due to different architectures of SNS. As it is well-known fact that, Facebook has its own methodology for collecting of individual profile information at different point of time, where as WhatsApp does not support this facility instead, it uses mobile number through which various activities of the users are attached at one location. Similarly, Twitter has its own affordance of collecting, sharing and responses of user's tweets from different users.

In SNS, Identifying the behavior of user varies from person to person as it depends on various artifacts such as linguistic, usage of patterns, words and their mentality of responses for a given context. To detect those words, WordNet Ontology can be effectively used for this purpose, WordNet Ontology is an intelligent logical dictionary that assists to detect the various synonyms for a single or multiple words [4]. Further, the Probabilistic GSHL and TreeAlignment Algorithms assists in categorizing the predicted synonym of a particular word precisely under a specified Ontology through learning process [15].

Predicting the context from set of existing words is an intelligent mining process, for this machine learning techniques are used which relies on historical knowledge. Most of these techniques are efficient, but are deployed on well-defined data to get the results from which logical rules are formulated.

The hindrance of machine learning technique is they make use of statistical measures which exploit topic-related terms, but the results obtained are not satisfactory in practical applications [5]. TensiStrength program uses the lexical approach with set of logical rules to predict the stress from tweets has given better results when compared to machine learning and sentimental analysis techniques [5]. Thus, studies suggest embedding of well-defined rules in real-time applications; assist for fast and quick retrieval of useful information.

Dear Prof. / Dr. / Ms. / Mr. Muhammad Umar Farooq,

Congratulations!

The reviews of your paper ID: 3199 entitled: DISTANCE AND RANGE BASED PROTOCOL FOR DATA DISSEMINATION IN VANETS are now complete and it is our pleasure to inform you that the consensual decision of the Technical Programme Committee (TPC) is to accept the above mentioned paper for presentation in INDIACom - 2018; Computing for Nation Development, technically sponsored by IEEE Delhi Section, scheduled to be held during 14th - 16th March, 2018 at Bharati Vidyapeeth, New Delhi (INDIA) and publication in the Soft Copy Pre - Conference Proceedings having ISBN 978-93-80544-28-1 serials.

This acceptance is subject to completion of the registration formalities of at-least one of the authors upto 29th January, 2018, in the applicable category, the signed copy of the Copyright Transfer Form available at [http://www.bvicam.ac.in/indiacom/Downloads/Copyright Transfer Form.pdf](http://www.bvicam.ac.in/indiacom/Downloads/Copyright%20Transfer%20Form.pdf) and the Certificate of Originality and Confirmation to Attend the Conference available at [http://www.bvicam.ac.in/indiacom/Downloads/Certificate of Originality and Confirmation to attend the Conference.pdf](http://www.bvicam.ac.in/indiacom/Downloads/Certificate_of_Originality_and_Confirmation_to_attend_the_Conference.pdf). Registration Form and other details can be downloaded from [http://www.bvicam.ac.in/indiacom/Downloads/Registration Form for INDIACom%202018.pdf](http://www.bvicam.ac.in/indiacom/Downloads/Registration_Form_for_INDIACom%202018.pdf) and the payment modes can be viewed at <http://www.bvicam.ac.in/indiacom/Downloads/Payment%20Mode.pdf>.

Kindly note that Registration Fee covers processes related to Conference Organization and Hospitality. All publications (Soft Copy / IEEE) as per applicable date and pre-notified policy, are free of cost.

You are hereby invited to personally attend the Conference during 14th - 16th March, 2018 and present the paper as per the presentation schedule. Please note that only those papers, which are presented during the conference, will be submitted to IEEE Xplore for publication and indexing.

Important:- Kindly note that the maximum allowable length of your manuscript is six pages. In case the length of the Final Version of your manuscript exceeds six pages after final formatting (as per the template of INDIACom - 2018 available here for download and reference), extra page charges, as mentioned on the Registration Page will be applicable for each additional page.

Please note that no requests for withdrawals will be entertained after 21-Jan-2018.

Please feel free to contact us for any clarification, if required. The details of the Track Incharges and other Contact Persons are available at Conference Secretariat Page at <http://bvicam.ac.in/indiacom/Conference%20Secretariate.asp>.

DISTANCE AND RANGE BASED PROTOCOL FOR DATA DISSEMINATION IN VANETS

Abstract- Modern methodologies in cellular connection technologies and transportation industry have set off a basic study for the course of VANETs more than the past few years. VANET contains vehicle-to-vehicle (V2V) additionally, vehicle-to-infrastructure (V2I) trades reinforced by remote access progresses, for instance, IEEE 802.11p. The progression in remote correspondence has been envisioned to get better road security and speed action capability in not all that far off future over the change of Intelligent Transport Systems (ITS). In this way, management, auto-mobile ventures and the insightful group are strongly teaming up through a couple of consistent look at exercises to set up standards for VANETs. The standard course of action of VANET application areas, for instance, vehicle affect forewarning and action information diffusing have made VANET a fascinated field of wireless technology. The main aim of this publication is to curb out congestion problem, also known as Broadcast Storming Problem (BSP)-in broadcasting of alert messages flooding protocol is practiced, which leads to congestion-along the path of source to destination route. In this paper, we devise a solution for BSP by setting a minimal distance and range across the vehicle that has to transmit data about any irregularity on the path.

Keywords- VANET; data dissemination; IEEE 802.11p; Intelligent Transport Systems (ITS); Broadcast Storm Problem (BSP)

I. INTRODUCTION

Installing advanced wireless connection in street vehicles broadens the scope for ITS applications as a result of giving security and willingness to transfer. Self-composed network shaped by the given vehicles is alluded to as a VANET, which, in most recent years, has risen as the most promising remote network to help an assortment of applications going from street security to infotainment. As of now, the VANETs embraces DSRC innovation [1] that is under the procedure of getting widespread as the IEEE 802.11p/WAVE standard [2]. The DSRC's physical layer is a modification of IEEE 802.11a and offers information rates of 3-27 Mb/s in 10 MHz channels.

As of now, a few multicast conventions [3] [4] for one to many group connections have been proposed in VANETs.

They misuse the notable multicast tree development calculations for example, Shortest Path Tree (SPT) and Minimum Spanning Tree (MST) to productively forward information from an origin to specific target [5]. In any case, the SPT convention [3] just limits the way cost (i.e. nonstop delay) from a source to specific target, and the MST convention [4] just limit the aggregate cost (i.e. transmission number) of a multicast tree. In any case, business and exciting applications, for example, video conferencing also file exchange ask for both to limit the end-to-end postponement and lower the defer variety for delay-sensitivity, and to lessen the transmission number for cost-effectiveness concurring to their application highlights. Moreover, since VANETs have one of a kind qualities, for example, high portability of vehicles and their arrangement and development just on streets, multicast tree development calculations ought to be planned by considering these attributes.

VANET simulation condition ought to be reasonable requiring a precise outlook of the vehicle portability and data transmission between the cars, and furthermore effective requiring a sensible measure of simulation period. As a matter of fact, portrayal of the vehicle versatility requires utilizing certifiable street topology, precise minute portability displaying and genuine information based movement request demonstrating while a practical portrayal of the data transmission between the vehicles require imitating the physical data lines proliferation process for a known situation. However, a proficient portrayal of the vehicle portability and data transmission model requires investigating both the nearness to the practical portrayals as far as the key measurements optimizing the flow of the VANET structure with time as well as space, and run time of the simulation.

Fundamentally, critical messages are exchanged with higher need over path. In any case, signaling is, in the same way, essential as it shapes the premise of a differing scope of ITS projects [7]. Note that for an additional exact data refresh, guides must be produced at a period of 100 ms [6], [8]. Without legitimate synchronization at the MAC layer, such an increasing recurrence can without much of a stretch outcome in direct clog in areas of high vehicle densities, in this manner causing genuine corruption in the QoS execution of security framework. The event represents one of the upcoming difficulties considering the huge market infiltration of street vehicles. Regardless of the possibility that a more noteworthy

Title of the Paper: Design of Folded Gilbert Cell Mixer for MICS Band

List of Author(s): Jabar Othman, Md .Noor Ullah Khan and Maryam Fatima

Dear Author(s),

Congratulations! Your submission mentioned above has been accepted for oral presentation in "*International Conference on Electrical, Electronics, Computers, Communication, Mechanical and Computing (EECCMC)*" with IEEE conference record number # 43456. The paper code has been mentioned in this letter for future communication. Please also find the common points which may useful in the preparation of final paper or camera ready paper. We wish you best of luck for your presentation. The registration is mandatory in order to include the paper in final proceedings which will be submitted for inclusion in IEEE Xplore digital library.

Hope to receive further papers from your side and please circulate the information about our conference in your circle.

Common points to all the authors:

1. Paper should be in IEEE EECCMC format which is available in conference website.
2. All final paper(s) should be submitted through link. The link will be sent to all registered authors shortly.
3. References should be cited properly and must be in ascending order while citing.
4. Figure numbers and equation numbers must be cited at appropriate places if any.
5. Figure numbers should be in proper order (Numbering).
6. Page numbers should be removed. Final paper should not have any page numbers and header.
7. Plagiarism should be less than 20%.
8. Final paper should be in PDF Format.
9. PDF file should be passed through PDF Xpress. The detail of PDF Xpress is available in conference website.
10. For any clarifications, please mail us at satish@eeccmc.org

Subject: Acceptance Letter – 2nd International Conference on Inventive Systems and Control (ICISC 2018) – Reg.

Dear Author,

Congratulations on the acceptance of your paper! And thank you for your interest in the 2nd International Conference on Inventive Systems and Control (ICISC 2018).

On behalf of the Conference Advisory Committee, I would like to formally invite you to attend the 2nd International Conference on Inventive Systems and Control (ICISC 2018) to present your paper.

The aim of this international conference is to provide a forum for sharing experience and expertise in creating innovative and successful learning, teaching, research and outreach environments. All submissions will be peer reviewed and acceptance will be based on quality, relevance, and originality. Presenters will be given the opportunity to have their submissions included in the on-line conference proceedings.

Looking forward to seeing you at the conference on 19 - 20, January 2018.

Yours sincerely,

P. Pitchandi

Prof Dr. P.Pitchandi, HOD/Mech

Subject: Permission for Paper presentation

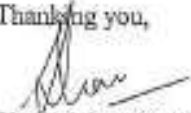

Respected Sir,

I am writing this letter to request for permission to attend the two days International conference being held at Gitam University, Hyderabad on 11th and 12th of Aug. The topic to be discussed in the conference is quite relevant to my research work and this is the reason I am keenly interested in presenting a paper in it. My latest research paper entitled "**Interactive Listening Activities in ESL classroom: from Passive to a more Comprehensible Input**" is ready for presentation.

I seek your permission for being a part of this conference. I hope you will certainly accede to my request and oblige. The registration fee of Rs 1500/- was paid online (NEFT), the details of which are given below for your perusal.

NEFT INB: IRD8965056, ENG DEPT. GST HYD.

Thanking you,

Shef Muhammed Khan

- Registration
- Each paper must register by one author, if the coauthor would like to attend he/she must register as a listener
 - Authors must cover the transfer cost from their (Bank account or PayPal account or credit card) to IML'17 account.
 - Confirmation that registrations have been received will be emailed by return; please contact the conference office if you do not hear from us within 5 working days of sending or submitting your form.
 - Payment is required to confirm a place at the event. Delegates are advised that the IML'17 planning committee, Venue West Conference Services Ltd and The conference venue accept no responsibility for loss or damage to their property, or for any other loss other than in respect of death or personal injury resulting from the College's negligence. Delegates are therefore strongly advised to make sure they have the appropriate insurance.
 - There may be a photographer at the event and photographs may be used on future marketing materials. If you do not want your photograph used in this way please notify a member of the conference organising team.
 - All registration data will be owned by the IML2017 planning committee.
 - Delegates must take their responsibility about hotel reservation (booking room at UK), travel from their country to UK, travel from UK airport to the conference venue and travel from conference venue to their country in return.
 - The IML' 17 planning committee reserve the right to alter the programme due to unforeseen circumstances.
 - The IML' 17 planning committee reserve the right to reject any paper after registration in case (IML'17 committee found the paper has been published before) and registration will not be returned.

CANCELLATION POLICY

IML' 17 will refund only 40% in case of cancellation.

POWER-EFFICIENT ADD-COMPARE-SELECT UNIT IMPLEMENTATION BASED ON GATE DIFFUSION INPUT (GDI) LOGIC

¹Rehana Farheen, ²Dr. Kaleem Fatima

¹Assistant Professor, Dept of ECE, MJCET Engineering College, Hyd, Telangana, India

² HOD, Department of ECE, MJCET Engineering College, Hyd, Telangana, India
rehana.farheen@gmail.com, kaleemfatima@gmail.com

Abstract — This paper presents an area efficient, low-power and robust Add Compare Select (ACS) unit for Viterbi Decoder using GDI (Gate Diffusion Input) logic. Viterbi decoder is used for decoding data encoded using Convolution Forward Error Correction codes or data that suffers from inter-symbol interference. They occur in a large proportion of digital transmission. Viterbi decoders employed in digital wireless communications are complex and dissipate large power. In present scenario the minimization of power consumption have emerged as a key design constraint over the last few years. The proposed method focuses on GDI, which is a low power technique of digital circuit design. Dynamic component of power is reduced in GDI technique as source of PMOS is not permanently connected to V_{dd}. It also reduces the latency of the circuit. The GDI cell is similar to the standard CMOS inverter, but there are some important differences. The ACS has been implemented using GDI cell with 0.18µm technology. The proposed design is obtained with reduced power dissipation in comparison with CMOS.

Index Terms—Viterbi decoder, GDI circuit, CMOS, low-power, high-speed.

I. INTRODUCTION

THE increasing demand of complex mobile systems, which has been observed during the last years in the worldwide market, led the designers to take into account a new objective in the design of complex digital circuits: the minimization of power consumption [1]. The systems like laptop and palmtop computers, cellular phones, wireless modems and portable multimedia applications is one of the most important reasons that fuel the need for a low-power design. The need for minimization of power dissipation of a system is also enforced by some thermal considerations; a big portion of the energy requested by a device from the power supply is converted into heat [2]. In this way heat dissipation system and cooling mechanisms become indispensable for the correct and safe operation of the device and also for its reliability. The commonly used encoding schemes for minimizing the probability of error are: Block codes, cyclic codes, convolution codes. Convolution codes are widely used because of simple encoding and efficient decoding techniques. Convolution codes were first mentioned by

Elias [3] in 1955. Andrew J. Viterbi Algorithm belongs to a large class of FEC (Forward Error Correction) codes known as convolution codes which are used in a wide range of applications such as wireless communications, digital mobile telephony, digital TV broadcast, CD-ROMs, and magnetic disks. The basic idea behind the Viterbi decoder is to maximize the correlation between received vector and the table of possible code words while sequentially performing the opposite operation of the encoder. The Viterbi decoder operates by finding the maximum likelihood of the decoding sequence. Several attempts for increasing the throughput and reducing the power dissipation and the area in the Viterbi decoder have been reported in the literature [4-10].

This paper has been organized as follows: section I presents introduction, Viterbi encoder/decoder has been described in context of ACS in section II, followed by the GDI techniques design of the ACS unit.

II. ADD COMPARE SELECT UNIT

A. Convolution Encoder

The operations of the convolution encoder and decoder for constraint length of 3 are presented in this section. The convolution encoder has a rate of $\frac{1}{2}$ (k/n) with a constraint length of 3. With an encoder, the 3 bit shift register provides the memory and two modulo-2 adders provide convolution operations. For each bit in the input sequence, two bits are output, one from each of the two modulo-2 adders.

Figure 1: Convolution Encoder with rate of $\frac{1}{2}$ (k/n) with a constraint length of 3.

Figure 1 represents a convolution encoder that takes

SIMULATION OF TRAP EFFICIENCY FOR SRIRAMSAGAR RESERVOIR USING ARTIFICIAL NEURAL NETWORK TECHNIQUES

JAMAR SULTANA⁽¹⁾, M. GOPALNAIK⁽²⁾

ABSTRACT

The storage reservoirs built across rivers and streams, undergo deposition of sediment. This deposition which takes place progressively in time reduces the active capacity of the reservoir to provide the outputs of water through passage of time. A major portion of the silt that is carried along with the river water settles down in the reservoir, which causes the reduction in its storage capacity, which in turn reduces the benefits from the reservoir projects which were constructed with a huge investment. Thus reservoir sedimentation has become a major problem all over the world. There are a number of methods for estimation of reservoir sedimentation but all these methods differ in terms of their complexity, inputs and other requirements. In the simplest way, the fraction of sediment deposited in the reservoir can be determined through the knowledge of its trap efficiency. In this study, the empirical formulae are used for estimating the trap efficiency of Sriramsagar reservoir which is located on Godavari river in Nizamabad district of Telangana State, in India. The observed trap efficiency is calculated using empirical equation suggested by Heinemann (1981) and compared with the Brune, Brown method which uses the capacity-inflow ratio for medium sediment depending upon the size of the reservoir and also compared with Gill method which is used for estimation of medium sediment. An attempt has also been made to develop the Artificial Neural Network Model (ANN) to simulate the trap efficiency of the reservoir using the Matlab software. A three layered ANN network with three inputs, ten neurons in the hidden layer and one output is selected. A Feed Forward Back Propagation (FFBP) model generated the trend of the trap efficiency values reasonably well with TRAINLM - training function, TRAINGDM - learning function and TANSIG - transfer function. The input parameters used are annual inflow, annual rainfall and age of the reservoir and the output parameter considered is the trap efficiency (T_s) of the reservoir. Twenty six years of data pertaining to Sriramsagar reservoir is used in this study. It is observed from the values of several performance statistical indicators that the ANN model predicted the trap efficiency of the reservoir with better accuracy and less effort than that of the conventional method. Based on the simulation results it concludes that the developed ANN model has more advantages over the conventional methods.

Keywords: Reservoir Sedimentation, Trap Efficiency, Artificial Neural Network.

1 INTRODUCTION

Reservoir sedimentation is caused due to many reasons. The important factors effecting the reservoir sedimentation are the watershed, sediment and river characteristics. The significant factors influencing the rate of siltation in a reservoir are: (a) Capacity to Inflow Ratio (C/I), (b) sediment content in the flowing water, (c) texture and size of the sediment, (d) trap efficiency (T_s) of the reservoir, and (e) the reservoir operation method. Methods to predict reservoir sedimentation have been the subject of several empirical studies since the 1950's. There are several methods to estimate the amount of sediments accumulated in reservoirs. One of these methods is trap efficiency method proposed by Brune (1953), Gill (1979), Dendy (1974), Heinemann (1981), Jotiprakash and Garg (2008). The trap efficiency method is used to estimate the amount of sediments accumulated in reservoirs by using the reservoir capacity-inflow ratio.

Neural Networks models have proved useful for better definition of the relationship between hydrologic parameters and sediment concentration. The Neural Networks model is essentially a nonlinear black box that correlates outputs to inputs by training its internal algorithms and their weighting schemes against a calibration data set. It is a highly nonlinear tool that can capture complex interactions among the input and output variables without any prior information about the nature of the relations between them. When ANN's are compared with the conventional methods, they can tolerate imprecise or incomplete data and approximate information.

Design and Development of Active Head Restraint for Whiplash Protection

Mohammed Ismail B¹

Senior Assistant Professor EED, Muffakham Jah College of Engineering & Technology, Hyderabad, India
e-mail: ismailceet@mjcet.ac.in

Mohammed Umair Quadri²

Assistant Professor EED, Muffakham Jah College of Engineering & Technology, Hyderabad, India
e-mail: quadriumair@gmail.com

Abstract— This paper implements a prototype design to evaluate an active head restraint system in use in a rear-end collision of a vehicle preventing and minimizing whiplash injuries. It proposes a cost effective solution for effective tracking a simulated model crash test, and proposes a novel electromechanical mechanism to lift and control the head rest of vehicle to an optimum position reducing chances of whiplash injuries. This work aims to design and develop an active head restraint system that can be linked to the occupant seat which effectively reduces occurrence of whiplash injury. The developed restraint system is tested for different occupants through a prototype mass & stiffness variations.

Keywords—Whiplash; Head restraint; Ultrasonic sensors; Rear Impact; Injury prevention;

I. INTRODUCTION

Whiplash is neck injury or sprain caused due to damage of delicate tissue strain. It has symptoms of severe neck, shoulder and fore head pains. The common reason for this is damage of tissue near neck due to unexpected expansion and flexion. It may also lead to severe injuries to neck joints, nerves, cervical muscles and slip discs if ignored. This is generally caused by automobile accidents or driving under sever and damaged road conditions. In automobiles Whiplash is occurs when it has been hit from the rear end with a typical impact speed less than 20 km/h[1].

A head restraint system is a device which automatically moves to a safe restraint position if any sudden impact occurs. This system automatically makes head position move horizontal & vertical to an acceptable distance range of setback when a rear impact occurs. The neck in some cases may undergo the S-shaped curve on the spine inflicting serious strain on the neck muscles in worst leading to a person not being able to turn his neck in rotation. Over 25 pairs of muscles may be injured in a whiplash injury and the spine may be severely affected if proper preventive care is not given after the rear-end accident.

The basic method of protecting whiplash injury in vehicles is to have an effective and a well designed head restraint system actively aligned and accurately designed for head restraint height and setback of horizontal distance. Various researches show that accurate and cost effective restrain systems are lagging in practical implementation causing serious medical costs with whiplash injuries for a rear collision impact for the vehicle occupants.

The work here proposes a cost effective design implementation of a active head restraint system that adjusts head rest to correct position mitigating the risk of whiplash injuries. It is tested for various impacts & distance trails through a prototype.

II. LITERATURE REVIEW

A. Survey data on vehicle accidents injuries

In a recent survey conducted in Japan the vehicle injuries and their impact it is found that Fig 1 more than 46% of accidents in High ways occur from rear end collisions due to various climatic and environmental conditions. The recorded data also shows that more than 90% are neck injuries or whiplash related damages to the occupant. Hence reducing or preventing these rear end impact whiplash injuries is a vital Challenging area of research.

Fig 1: Data on injury causing accidents due to vehicle collision

B. Existing High End Whiplash Protection Systems

Some of the important recent commercial head restraints are discussed here, the self-aligning head restraint (SHAR) first proposed by Saab then later adopted by, Opel, Ford, Nissan, Subaru, Hyundai, and Peugeot was in late 90s most popular. It had the mechanism of moving up and down of mechanical linkage to head rest during rear collision. It is dependent on the occupants head initial position and the force load exerted by head motion during impact[2].

Table 2 shows data for the vehicle front-seat persons during the rear end accidents through 18 months duration in Sweden. The samples taken were 196 users in which 14 are rear collision victims.

Acceptance Notification of Paper

Dear Author(s): Shaikha Hajera and Mohd Mahmood Ali

Congratulations, based on comments from reviewer(s) for your paper entitled: 'Survey on Image Dehazing Methods' has been accepted for **Oral Presentation** in "International Conference on Energy, Communication, Data Analytics and Soft Computing (ICECDS 2017)". The paper code has also been assigned to your manuscripts for any future communication, hence please mention your concerned paper code while contacting us regarding the conference. The Chair of conference and members of technical committee have provided the points of evaluation based upon recommendations as listed below.

Paper Code: SKR-IEEE-ECDS-1286

Easy chair Number: 1239

Note: Please mention your concerned paper code only for any future communication.

1. Quality/Novelty: <i>Obtained points (out of 15): 11</i>	6. Citation of References: <i>Obtained points (out of 10): 9</i>
2. Format of the paper: <i>Obtained points (out of 10): 9</i>	7. Literature Survey: <i>Obtained points (out of 10): 9</i>
3. Analysis: <i>Obtained points (out of 15): 11</i>	8. Conclusion: <i>Obtained points (out of 10): 8</i>
4. Results/Discussions: <i>Obtained points (out of 15): 13</i>	9. Language (English): <i>Obtained points (out of 5): 3</i>
5. List of Valuable References: <i>Obtained points (out of 10): 10</i>	<u>Total points (out of 100): 83</u>

Note*: Cutoff points for accepting the paper is '60' out of 100

The list of comments from reviewers is as listed below:

1. Paper format is not same as IEEE-ECDS
2. No IEEE copyright number (978-1-5386-1887-5/17/\$31.00 ©2017 IEEE) on bottom of the first page.
3. This paper has been recommended for accept in the conference and possible publication in IEEE Xplore Digital Library
4. References are not cited properly, i.e., not in ascending order.
5. References are not in proper format.

Title: An SIC-BS Linear Feedback Shift Register for Low Power BIST

Authors:
Sabir Hussain, MICET

Dear Authors,

I'm pleased to inform you that your above paper has been accepted for publication in "Proceedings of the 2017 DevIC Conference on Design of Integrated Circuits (DevIC 2017)", to be held at Kalyani Government Engineering College, Kalyani, West Bengal, India, organized by IEEE KGEC Student Branch Chapter in association with Department of Electronics and Communication Engineering, IIT KGP, Kolkata, India.

Please find attached the Copyright form in .Pdf and .Doc. The scanned copy must be submitted to the conference organizers latest by **February 20, 2017**. If an author did not provide the signed form, the paper will not be published in the conference proceedings or in IEEE Xplore. In other words, you must sign the Copyright Form with IEEE by means of signing and submitting an IEEE Copyright Form, you must name the scanned copyright form with the manuscript number given by IIT KGP.

Signing in with you into Hangouts

An SIC-BS Linear Feedback Shift Register for Low Power BIST

Sabir Hussain

Department of Electronics and Communication Engineering
Osmania University
Hyderabad, India.

V Muleshwara Rao

Department of Electronics and Communication Engineering
GITAM University
Visakhapatnam, India.

Abstract— In the existing high speed, highly advanced technology of VLSI design, the need of efficient pattern generator to minimize the test power dissipation without affecting the overall system performance. Built in Self Test (BIST) is promising technique and the extremely important module. The most widely used pattern generator used in BIST is Linear Feedback Shift Register (LFSR) because of its small area overhead and excellent pseudo random characteristics. The proposed shift register change BS LFSR which are Ex-OR with non zero value seed, generated by the BS-LFSR. The results are significantly enhance the correlation between the test patterns and results are very effective. This approach reduces the transition activity, dynamic power dissipation and improves the fault coverage.

Keywords— Low power BIST, SIC LFSR, Transition activity, ISCAS Benchmark Testing.

I. INTRODUCTION

In the era of VLSI design and test, the major challenges are performance, testing time, area overhead, and power dissipation during test. During the testing process, the power consumed is very large and compared to that in operation mode. As the complexity of the circuit diminishes, performance of the systems become dependent. So there is a need to reduce the power consumption by circuits to make them efficient and effective. The source of power dissipation is increase in transition activity in the applied patterns.

To reduce the power consumption among the patterns seed generator plays an important role. In our proposed method we replace the traditional seed generators and uses selective seed value of bit to reduce the complexity we are opting for Logic Built in Self Test (LBIST) which is a Design for Testability (DFT) technique that allows the system to test itself and for fault diagnosis.

Earlier techniques applied and proposed for scaling down the power consumption. In [1] the built in test patterns are generated by a pattern generator which is Ex-OR with seed

generator and obtained 188 mw test power. Another method in [2] proposed algorithm for low power LFSR in which 87.6 mw dynamic power dissipated during test. In above two approaches targeted benchmark is e432 circuit. In [3] LP-LFSR, seed generator is used to test synchronous 4x4 and 8x8 multipliers. Scan chain method in which the utilization of extra scan chain to reduce the switching activity and it is referred as selective triggering scan architecture [4]. Scan cell ordering testing technique is proposed in [5]. A dual speed technique for low power BIST describe in [6] [7]. To produce the random single input change (SIC) vectors, a mixture of LFSR and scan shift register is used in [8]. In [9] a random injection method is proposed, the 2nd single input changing data is inserted between two neighboring seed. In proposed methods power consumption is reduced, still the transition activities will be large when clock frequency is high. This paper proposed a novel technique to reduce transition activity with negligible clock frequency here conventional seed generator replace with Bit swapping LFSR called SIC-BS LFSR. The rest of the paper is configured as follows. In section II, explains background which describes ISCAS benchmark circuit ISCAS 85 C432 a 27-channel controller and power analysis concepts. The Hardware implementation details are discussed in section III. In Section IV describes result analysis and finally outlines the conclusion in Section V.

II. BACKGROUND

A. Circuit Under Test

The International Symposium for Circuits and Systems (ISCAS) has designed certain circuits called as the benchmark circuits that are extensively used in DFT. The benchmark circuits help to analyze the efficiency and effectiveness of a designed test pattern generators. The ISCAS 85 C432 benchmark circuit consists of three 9 bit buses named as P, Q, and R which represent the input channels. The position of bit in each bus represents the priority of interrupt request. These requests are enabled and disabled by an additional 9-bit input bus as E in the respective bit positions as shown in figure 1. It consists of 5 modules functions called F1 F2 F3 F4 and F5. Three interrupt request buses P, Q and R are present in the interrupt controller, each having one channel-enable bus E and nine bits or channels. The Priority rules are applied as follows: for any a, b, c; P[a] > Q[b] > R[c], i.e., bus P has the high level

Split litact domination in graphs

Dr. Abdul Majeed

Abstract: A vertex set of litact graph $m(G)$ consist of edges and cut vertices of a graph G . The two vertices in $m(G)$ are adjacent if and only if the corresponding edges and cut vertices are adjacent or incident in G . A litact dominating set $D \subseteq V(m(G))$ is a split litact dominating set of $m(G)$, if the subgraph $\langle V(m(G)) - D \rangle$ is disconnected. The minimum cardinality of vertices in such a set is called a split litact domination number of $m(G)$ and is denoted by $\gamma_{sm}(G)$. In this paper, many bounds on $\gamma_{sm}(G)$ are obtained in terms of elements of G but not the elements of $m(G)$. Also its relationship with other domination parameters is established.

Acceptance Letter for Oral Presentation

Paper Code: ICPCSI-0644

Title of the Paper: Comparison of Control Algorithm for Power Factor Correction in a Distribution System using DSTATCOM

List of Author(s): Mahammad Rafi

Dear Author,

Thank you very much for your submission mentioned above and Congratulations to you for accepted the paper in "*International Conference on Power, Control, Signals and Instrumentation Engineering (ICPCSI-2017)*" under the category of Oral presentation. The paper code has been mentioned in this letter for future communication. Please also find the common points which may useful in the preparation of final paper or camera ready paper.

Common points to authors:

1. Paper should be in IEEE ICPCSI format which is available in conference website.
2. All final paper(s) should be submitted through link. The link will be sent to all registered authors by separate email within 3 to 4 working days from registration.
3. References should be cited properly and must be in ascending order while citing.
4. Figure numbers and equation numbers must be cited at appropriate places if any.
5. Figure numbers should be in proper order (Numbering).
6. Page numbers should be removed. Final paper should not have any page numbers and header.
7. Plagiarism should be less than 20%.
8. Final paper should be in PDF Format.
9. PDF file should be passed through PDF Xpress. The detail of PDF Xpress is available in conference website.
10. For any clarifications, please mail us at contact@icpcsi.org (will get reply within 3 working days).

Comparison of Control Algorithms for Power Factor Correction in a Distribution System Using DSTATCOM

K. Muhammad Rafi

Department of Electrical and Electronics Engineering

kk.rafi@gmail.com

P. V. N. Prasad

Department of Electrical Engineering
University College of Engineering,
Osmania University, Hyderabad-500077, India.
pvnprasad199@gmail.com

Abstract - This paper exhibits the execution of a three phase distribution static compensator (DSTATCOM) by utilizing a back propagation control algorithm (BPCA) for harmonic elimination, reactive power compensation and power factor correction (PFC) under linear and non-linear load conditions. This paper compares BPCA strategies with synchronous reference frame theory (SRFT) strategies. These control algorithms are used to generate the switching pulses for IGBTs of the VSC of DSTATCOM. BPCA is based on the extraction of the fundamental weighted value of active and reactive power components of load currents which are required for the estimation of reference source current. Extraction of harmonic component decides the performance of compensating devices. BPCA and SRFT based DSTATCOM are simulated with MATLAB using Simulink for linear and non linear loads. Simulation results demonstrate the performance of DSTATCOM under these control algorithms.

Keywords - Back propagation control algorithm (BPCA), synchronous reference frame theory (SRFT), harmonics, reactive power compensation.

I. INTRODUCTION

In present day distribution systems (DS), the major loads are reactive loads, such as fans, pumps, etc. These loads draw lagging power-factor currents and therefore give rise to reactive power burden in the DS and situation worsens in the presence of unbalanced loads. If line draws more reactive power demand it increases feeder losses and reduces active power flow of the DS. These loads can be grouped as linear loads (lagging power factor loads), non-linear loads (current or voltage source type of harmonic generating loads), unbalanced loads and mixed types of loads. Some of power quality problems associated with these loads include harmonics, high reactive power burden, load unbalancing, voltage variation etc. Conventional equipment like LC Filters have been used as a solution to solve harmonic current problems, but these filters have several disadvantages such as, mitigation of few harmonics, rise to resonance problem, bulk in size etc. To overcome these disadvantages, custom power devices are developed and successfully implemented to compensate various power quality problems in a distribution system [1]-[4]. These custom power devices are classified as the DSTATCOM (Distribution Static Compensator), DVR

(Dynamic Voltage Restorer) and UPQC (Unified Power Quality Conditioner).

In this paper, a BPCA and SRFT control algorithms are implemented using DSTATCOM to extract the weighted values of load active power and reactive power components for linear and nonlinear loads [1]. In BPCA the training of weights has three stages. It includes the feed forward of the input signal training, calculation & BP of the error signals and upgrading of training weights. It may have one or more than one layers. Continuity, differentiability and non decreasing monotony are the main characteristics of this algorithm. It is based on a mathematical formula and does not need special features of function in the learning process.

II. SYSTEM CONFIGURATION AND DESIGN PARAMETER CALCULATIONS.

A DSTATCOM with voltage source converter (VSC) - is connected to 3-phase ac mains feeding 3-phase linear or nonlinear loads with internal impedance of grid which is shown in Fig. 1. The performance of DSTATCOM control depends upon detection of harmonic current and reduction of ripple currents. The tuned values of interfacing inductors (L_f) are connected at the ac output of the VSC. A three phase series combination of capacitor (C_f) and a resistor (R_f) represents the shunt passive ripple filter which is connected at a point of common coupling (PCC) for reducing the high frequency switching noise of the VSC. The DSTATCOM currents (i_{ref}) are injected as required compensating currents to cancel the reactive power components and harmonics of the load currents so that loading due to reactive power component/ harmonics is reduced on the distribution system. The voltage and current rating of the required compensation decides the rating of the switches [5].

The selection of the DC bus voltage, DC bus capacitor, AC inductors in the following sections and the corresponding values are shown in appendix.

A. DC Capacitor Voltage:

The value of DC bus voltage (V_{dc}) depends on the PCC voltage and its must be greater than amplitude of the AC mains voltage for successful PWM control of VSC of DSTATCOM. For a three-phase VSC, the DC bus voltage is defined as,

Subject: Permission to present a technical paper in IEEE International Conference on Devices for Integrated Circuit and sanction registration fee -req-reg.

Dear Sir,

We are glad to inform you that our research papers have been accepted and selected for presentation in IEEE International Conference on Devices for Integrated Circuit (DevIC 2017) to be held at Kalyani Government Engineering College from March 22-24, 2017, organized by IEEE KGEC Student Branch Chapter and we are interested to present the paper in above mention International Conference.

It is extremely important as per NBA paper publication and as per Osmania University compliance to improve faculty publication, the HOD has made it mandatory to present papers in reputed conference and to publish paper in IEEE Xplore Digital Library.

In view of this we request to kindly permit to present paper and also sanction registration fee for attending the conference.

Subject: Permission for Paper presentation

Respected Sir,

I am writing this letter to request for permission to attend the two days International conference being held at Gitam University, Hyderabad on 11th and 12th of Aug. The topic to be discussed in the conference is quite relevant to my research work and this is the reason I am keenly interested in presenting a paper in it. My latest research paper entitled "**Interactive Listening Activities in ESL classroom: from Passive to a more Comprehensible Input**" is ready for presentation.

I seek your permission for being a part of this conference. I hope you will certainly accede to my request and oblige. The registration fee of Rs 1500/- was paid online (NEFT), the details of which are given below for your perusal.

As I have been teaching the subjects Electromagnetic theory, Antennas and wave propagation, and microwave engineering, I would like to utilize this opportunity and attend the course. I believe attending this course will be a good exposure and opportunity to get inputs from experts in this domain, which I believe is very important to become more competent faculty.

Here I request you to kindly permit me to attend the course and provide the financial support of Rs 3000/- (Three thousand rupees only) towards the registration fee.

Herewith attached details of above said course for your peruse.

Thanking you,

Yours faithfully

Md. Akram Ahmed

SUB: Permission for attending workshop at Vasavi college of Engineering- Regarding..

Respected sir,

I NazeerUnnisa, Sr. Assistant Professor ECE dept requests you to permit me for attending a three day workshop on "Recent Advances in Wireless Communications" from 23-25 November, 2017 at Vasavi College of Engineering, Ibrahimpet, Hyderabad.

I will be thankful to you for the permission and sanction the amount of rupees 2000/- for the same.

Thanking you,

NazeerUnnisa

To,

The Advisor cum Director,

MJCET

Dear Sir,

sub: Permission to attend six day workshop on Digital chip Design for futuristic cardio vascular health monitoring, Request, Reg:-

This is to bring to your kind notice that IIT Hyderabad is conducting a GIAN workshop on "Digital chip Design for futuristic cardio vascular health monitoring" from 5 December to 19 December 2017. This is a niche area of research and the faculty conducting the program is from Italy. I am of the opinion that I will be able to bring projects with foreign collaboration by attending this workshop. In this regard, I request you to kindly grant me permission and OD to attend this workshop.

Further, the registration fees if Rs. 10,000 for faculty. However, Dr. Amit Acharya, who is my colleague in IEEE has arranged for a me a discount of 50% and the fees has been reduced to Rs. 5000/- I request you to sanction an amount of Rs. 5000/- for me to register for the workshop. Please oblige.

Regards

27/11/2017
Dr. Arif Sohel

Head, ECED

M. Rabeel
or process the case as a fund case to Rs 5000/-
for 27/11
